

Revenue and Financing Policy

The Revenue and Financing Policy sets out how the Council funds each of its activities and why. The policy provides ratepayers and customers with predictability and certainty about the sources for funding for our activities and in conjunction with the Long Term Plan provides certainty on the level of those funds. In determining how activities are funded. The Council is obliged to equitably share the costs of delivering services across different users as well as ensuring equity between current and future generations. In deciding how to fund each activity, the Council considers the nature of the services provided and who benefits from those services.

The Policy is set out in three sections as follows:

1. Approach
2. Funding mechanisms
3. Funding of activities.

Review

The Revenue and Financing Policy is reviewed three-yearly as part of the ten year planning process.

Approach

In determining how activities are funded the Council is obliged to equitably share the costs of delivering services across different users as well as ensuring equity between current and future generations. In deciding how to fund each activity, the Council considers the nature of the services provided and who benefits from those services.

It takes into account:

- the council outcomes¹ to which an activity contributes
- the distribution of benefits between the community as a whole, identifiable parts of the community and individuals
- the period during which the benefits are expected to occur
- the extent to which actions, or inactions, of individuals or groups contribute to the need to undertake the activity
- the costs and benefits of funding the activity distinctly from other activities.

It then considers the overall impact of any allocation of liability for revenue needs on the District, local communities and communities of interest.

Guiding principles

The Council has identified some overarching principles that it considers important in taking a fair and equitable approach to funding its activities.

Essential services

The Council considers that some of its services are essential and fundamental to the functioning communities in the Thames-Coromandel District. These include water, wastewater, stormwater, roads and footpaths (district) and rubbish and recycling.

All our communities should have (over time) equitable access to the level of essential services that a community requires to meet their needs, regardless of whether there are differences in cost (while noting that need may be specific to different communities).

¹ For the purposes of this policy, the term 'council outcomes' in this policy means 'community outcomes' as defined in the Local Government Act 2002.

Differences in the cost of delivering these services locally are often due to factors outside of the communities control such as the sensitivity of the surrounding environment on the availability of water at source. Hence, the Council does not see it as appropriate to recognise exacerbators (those that cause costs) based on the catchments or areas in which users may choose to access services. Rather, the Council considers that communities throughout the district benefit from those services and has therefore chosen to have a consistent approach to the way it views the beneficiaries and exacerbators of these services.

Ability to pay

Concerned about the public's ability to pay rates, the Council seeks to maintain an affordable and predictable level of rates in the future.

District diversity

The Council also acknowledges the diversity of our communities, and wishes to recognise the different users and needs in its rating structure where considered appropriate. This includes targeting funding (whether it be through rates or user charges) to those who generate demand or benefit from Council services, but only to an extent that is considered affordable.

In addition, a priority of the Council is to empower local communities to have greater decision-making on services that it considers are local in nature. This includes activities which are considered to be non-essential (but still important) activities and therefore may vary across local communities.

Because this approach enables Community Boards to set these services at a level specific to their Community Board area, the Council is of the view that these local communities are the primary beneficiaries and exacerbators of these services rather than the district as a whole. It follows that in these cases, Community Board area-based funding is considered appropriate.

Funding through rates

The Council has reviewed its approach to allocating funding requirements across ratepayers. Currently the Council funds a number of activities through rates based on value i.e. the higher the rateable value of a rating unit, the higher the proportion of rates assessed. This approach is taken where it is considered that the value of a rating unit is a better indicator of ability to pay.

The Council has identified services where it believes that the ratepayers all benefit equally. In these cases the Council believes that it is fairer in many cases to distribute the costs uniformly. That means the value of the rating unit is not considered when setting and assessing these rates.

There is a limit to how much the Council can fund through uniform charges so not all of the Council's business can be funded this way.

Funding mechanisms

Types of expenditure

Broadly speaking the Council has two types of expenses: **operating expenditure** and **capital expenditure**.

Operating expenditure is used to fund the on-going day-to-day activities and services of the Council.

Capital expenditure is money spent in acquiring or upgrading a business asset such as infrastructure, equipment or buildings. The Council has three categories of capital expenditure spread across its activities:

- *Renewals* – Defined as capital expenditure that increases the life of an existing asset

with no increase in service level

- *Increased Level of Service (ILOS)* – Defined as capital expenditure that increases the service level delivered by the asset.
- *Additional Capacity (AC)* – Defined as capital expenditure that is required to provide additional capacity, in whole or part under Council's Development Contributions Policy, necessary to accommodate growth.

Funding mechanisms

Different funding sources are used for different types of expenditure. This document outlines how the Council will fund its expenditure using the following funding mechanisms:

- General rates, including:
 - valuation system
 - differential rating
 - uniform annual general charges
- targeted rates
- lump sum contributions
- fees and charges
- interests and dividends from investments
- borrowing
- proceeds from asset sales
- development contributions
- financial contributions under the Resource Management Act 1991
- grants and subsidies
- other sources.

Rates

The Council distinguishes between two different rates types:

1. General Rate
 - a. General Rate set at a different rate in the dollar of rateable value for different categories of land
The land value rating system will be used as the basis for setting and assessing general rates.
 - b. General Rate - Uniform Annual General Charge - set on a per separately used or inhabited part of a rating unit.
- . The Council considers the level of fixed charges and property value based general rates each year and is able to make adjustments through the annual plan process.
2. Targeted Rates
Targeted rates are rates that are charged to particular communities or groups of ratepayers. They are used to fund services where a particular community or group benefits from the activity being funded.

Lump sum contributions. The Council does not offer this payment option under Part 4A of the Local Government Rating Act 2002. It does however continue to provide for payments in advance via its internal 'lump sum payments policy' based on section 56 of the Local Government Rating Act 2002 referred to as 'payments in advance' which are a targeted rate. It continues to do this because section 56 provides more flexibility to Council than offering lump sums under the more prescriptive Part 4A of the Local Government Rating Act 2002.

Investment interest and dividends has been used to reduce the amount of the Uniform Annual General Charge. This rating subsidy will be gradually reduced to enable the use of interest and dividends to inflation-proof the capital sum of the Council's investments. Interest on the depreciation reserves will be utilised by the related activity of the depreciation reserve.

Borrowing is used to ensure fairness or 'intergenerational equity' so that current ratepayers pay for the services they use now, and future ratepayers pay their share too. Council only uses

borrowing to fund operational expenditure for smoothing the rating impact when it is appropriate to do so.

Proceeds from asset sales are the monies received from selling physical assets, such as plant and equipment. They are initially used to repay debt any other liabilities associated with that asset, and then fund a replacement asset if necessary. . Any remaining proceeds will be added to the Council's investment fund.

Development contributions are the funds received from developers when they develop property. They are used to fund capital works that are driven by the need to provide services to our growing communities. As the cost of growth is driven by development, the Council considers that it is equitable that a development should meet its share of the resulting costs. The Council's Development Contributions Policy details the method by which development contributions are obtained to fund the infrastructure required due to property growth.

Financial contributions are contributions required under the Resource Management Act 1991. This funding mechanism is being phased out over the next five years due to a legislation change. The Council is still receiving financial contributions for some older resource consents.

Grants and subsidies are funding received from other agencies for a specific purpose. .

Other sources including reserves are funds for specific purposes. *Retained earnings* are used to fund operating or capital expenses at the Council's discretion. *Special reserves* will be used to fund either operating or capital expenses according to the policy applying to those reserves.

Depreciation reserves are funds in which the probable replacement cost of equipment is accumulated each year over the life of the asset, so that it can be replaced readily when it becomes obsolete. These reserves are used to fund the renewal of assets.

User fees and charges are fees charged to individuals or groups who are directly using a Council service. User fees and charges also include rental income, and trade waste fees and charges. For a user charge to be charged, the beneficiaries must be able to be identified and charged directly. The Council also considers issues like the affordability of user charges or how they compare to the market rate for services. The use of user charges may be balanced with other funding sources where the Council believes that a charge set too high will reduce use and therefore diminish the value of the service to the community and impose a greater cost on ratepayers.

Funding of activities

The Council has considered how to apply the available funding mechanisms to its activities. The following table provides a summary of how activities are proposed to be funded. The Council has also completed a detailed assessment which informed this policy and it is available on our website. For operational expenditure, funding portions contributing to each activity are expressed as ranges, from low to high. These ranges equate to the following percentages:

Low:	0- 33%
Medium:	34-66%
High:	67-100%

Application of funding mechanisms to expenditure

Different funding sources are used for different types of expenditure. The Council uses the funding mechanisms as follows:

* Application depends on how the activity to which the capital expenditure relates is funded.

** As set out in Part 4 of the Local Government Rating Act 2002
